## GET SUPERPOWERS WITH ANACONDA

Anaconda is the leading open data science platform powered by Python. The open source version of Anaconda is a high performance distribution of Python

### Which version should I download and install?

With Anaconda you can run multiple versions of Python in isolated environments, so choose the download with the Python version that you use more often, as that will be your default Python

Anaconda3 4.1.1 (64-bit) Setup

**License Agreement**

Please review the license terms before installing Anaconda3 4.1.1 (64-bit).

Press Page Down to see the rest of the agreement.

pyopenssl  
A thin Python wrapper around (a subset of) the OpenSSL library.

kerberos (krb5, non-Windows platforms)  
A network authentication protocol designed to provide strong authentication for client/server applications by using secret-key cryptography.

cryptography  
A Python library which exposes cryptographic recipes and primitives.

If you accept the terms of the agreement, click I Agree to continue. You must accept the agreement to install Anaconda3 4.1.1 (64-bit).

Anaconda3 4.1.1 (64-bit) Setup

**Advanced Installation Options**  
Customize how Anaconda integrates with Windows

**Advanced Options**

- ☒ Add Anaconda to my PATH environment variable  
This ensures that PATH is set correctly when using Python, IPython, conda, and any other program in the Anaconda distribution. If unchecked, then you must use the Anaconda Command Prompt (located in the Start Menu under "Anaconda (64-bit)").
- ☒ Register Anaconda as my default Python 3.5  
This will allow other programs, such as Python Tools for Visual Studio, PyCharm, Wing IDE, PyDev, and MSI binary packages, to automatically detect Anaconda as the primary Python 3.5 on the system.
